

1. NORMAL CONDITION

You knew that when key ID code is ready stored on transponder chip and IMMO has registered for this key ID code also ready active on EEPROM (8 pins) in IMMO then IMMO system will check all key IDs when you insert any key into key cylinder. If key ID is correct then IMMO will enable to start engine. Else, if not engine will cannot start.

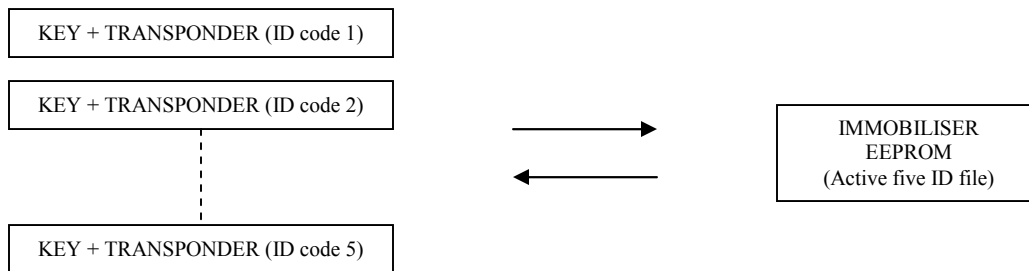

2. WRONG KEY CODE CONDITION

When IMMO check key ID code is incorrect or do not check it then ECM do not control ignition and injection, you cannot start engine

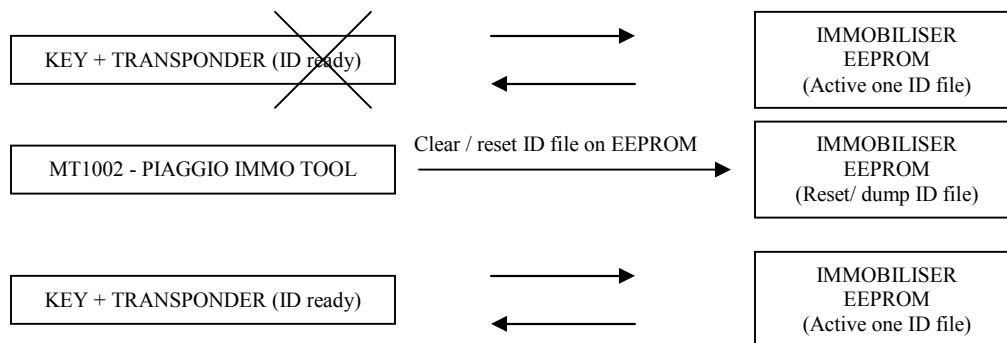

3. MAKE NEW KEY WHEN STILL AN ORIGINAL KEY

You knew that IMMO could accept about five key ID codes (unlike ID codes) but all able to start engine if it have been declared to IMMO by registration method. Therefore, if you still keep an original key ID, you can register more one or many new keys direct on key cylinder of the motorcycle by few special procedures by your hand without special tools. Therefore, all key can start engine.

4. LOST ALL OF KEY CONDITION

You lost all keys while the IMMO is storing active ID code file then you not any way for start engine with other ID key. However, if you have MT1002 - PIAGGIO IMMO TOOL then this tool can clear/ reset ID file EEPROM IC into IMMOBILISER to manufacturer original file. Now, you can make a new key by registration method if you have a key ID code is ready when by from key shop (**important note: when you buy all original transponder keys from shop is ready store a default ID code in transponder, cannot clear this ID**). Other way, if you buy not original transponder (not ID code ready, you can clear or write ID) you also can “copy key ID code to key ID code” from other key by a normal copy tool as MT1003 on DTDAUTO.COM website

5. CLONE KEYS (COPY KEY TO KEY)

This is the make key method for hackers, it use a sample key ID has registered to IMMOBILISER clone to many keys by copy method by key copy tool same as MT1003 product on DTDAUTO.COM website (note: all keys will like sample ID). However, with PIAGGIO key, you do not need to buy copy tool. You is only use reset tool MT1002 can do all, because, all original transponder is ready store an ID inside. It is good/ strong transponder better than others.

6. SUPPORT & SERVICE

DTDAUTO could support all problems in the make PIAGGIO keys. We also supplier all tools, transponder, key shell, key cylinder and can ship to you duration 4 to 5 business days. Thank you for your interesting!
