

❖ Image**❖ Function & Advantages**

- Automatically identify and check all windows (*or any window in it*) is not locked (*up glass*) when the driver door lock with remote control (*or key lock by fast action*) and the automatic window is lock
- When lock the door by remote control, this system will be automatically check the window and lock it automatically, no need driver moved to the car.
- Self-recognition system in the glass door is in the process of raising obstacles to break the safety glass for use in children, the elderly are not clamping your hands, protecting the door motors and electrical systems car.
- System active even polite glass lock switch (*Courtesy*) is in the ON position
- The system will not activate when the driver is driving on the roads.

❖ Overview

SARAI is an abbreviation of an accessory electronic device to do intelligent glass window system in new cars. Products studied and made by DTDAuto Technology Team of Vietnam.

❖ Application

Apply on most of the car with electrical control glass door

❖ Why should you use this device

- In fact, after leaving the car (*especially when it gets dark about parking outside the grounds*), the driver locked the doors are difficult to observe (*or forget*) whether the windows have already closed or not, thus, locking door will no longer be valid, unsafe vehicles and equipment inside.
- If locking the door by remote car door lock it is unable to lift the glass to lock
- Moreover, when detecting the window does not close from a far distance, driver must move to close window, turn on ignition key and closed the window so very inconvenient.
- Other way, the windows are being close, if the hands of children, elderly people or obstacles that are caught-up on the glass slide are not safe for everyone a broken or jammed, the motor fires...
With SARAI, all above problems will be resolved on the intelligent, fully automated and secure feeling for everyone.

❖ Basic technical specifications

- Installation inside the driver door
